

ABSORBENT GARMENT

ABSTRACT OF THE DISCLOSURE

An absorbent garment has an absorbent assembly disposed within a garment shell configured for encircling a wearer's waist. The absorbent assembly has an inner surface adapted
5 for contiguous relationship with the wearer's body, a front waist region in opposed relationship with a front waist region of the garment shell, a back waist region in opposed relationship with a back waist region of the garment shell, and a crotch region extending longitudinally between and
10 interconnecting the front and back waist regions of the absorbent assembly. The absorbent assembly is releasably attached generally at a front waist end thereof to the garment shell generally at the front waist end of the garment shell, and is also releasably attached generally at a back
15 waist end thereof to the garment shell generally at the back waist end of the garment shell.
